

BOTTLED WATER VS. PURITY SOURCE

HERE'S HOW IT WORKS

1 City water is filtered and bottled.

2 Bottled water is then stored. For how long? Your guess is as good as ours.

3 Water is pulled from storage, placed on a truck and delivered to your office.

4 You pour a glass of water from a rented dispenser that may begin to accumulate mold over time.

5 Empty bottles pile up and are eventually taken away. Hopefully not to a landfill!

HERE'S HOW OUR SYSTEM WORKS

1 Your water starts in the same place, BUT

2 Water being piped directly into your office is then run through PHSI's patented Water Guardian filtration system.

3 You enjoy water purified on demand through a new, professionally installed and maintained water dispenser.
